

Move Beyond Worksoft 12.x

A Stronger Platform for the Way Your Business Operates Today

Since Worksoft 12.x, the Worksoft platform has evolved well beyond maintenance updates. Worksoft 2026 introduces powerful new capabilities that help organizations automate more efficiently, reduce maintenance effort, improve release confidence, and better support modern SAP and enterprise application landscapes. Whether you're modernizing SAP, accelerating DevOps, or preparing for AI-driven enterprise change, these innovations provide compelling reasons to upgrade.

Capability	Customer Benefit
AI-Powered Automation	Accelerate automation and reduce maintenance with AI-powered capabilities in Worksoft Certify, including self-healing, intelligent root cause analysis, AI-generated failure summaries, and smarter automation that adapts as applications evolve.
Impact-Driven Testing	Test what changed, not everything. Worksoft Impact prioritizes testing based on business impact with automated SAP change analysis, ST03 usage intelligence, transport correlation, and tighter integration with test execution.
Integrated Test Data Management	Ensure the right test data is available when you need it with Worksoft Data Connect, powered by EPI-USE Labs, delivering integrated test data management and automated SAP system refresh capabilities to improve test quality and reduce delays.
Enterprise Test Orchestration	Transition from Execution Manager to Continuous Testing Manager (CTM), now significantly enhanced with enterprise-scale scalability, usability, reliability, and execution management capabilities for large, complex automated testing environments.
Modern Reporting & Release Visibility	Gain richer insight into test execution, quality, and release readiness with Worksoft Reporting Services (WRS), providing modern dashboards, scalable reporting, and API-based access to enterprise testing data.

Capability	Customer Benefit
Connected DevOps & ALM	Integrate testing into your delivery pipeline with expanded support for SAP Cloud ALM, SAP Solution Manager, Azure DevOps, Jira, Zephyr, Perforce ALM, and other enterprise DevOps platforms.
More Resilient Test Automation	Protect your automation investment with major enhancements to Worksoft Certify, including improved object recognition, expanded browser support, SAP Fiori automation, embedded web technologies, and more resilient execution across enterprise applications.
Faster Test Creation & Maintenance	Create and maintain automation more efficiently with Worksoft Business Capture, now featuring native macOS support, improved object management, simultaneous capture and execution, and a streamlined automation creation experience.
Enterprise Authentication & Security	Simplify administration with platform-wide enhancements including Single Sign-On (SSO), OpenID and LDAP authentication, Microsoft 365 integration, OAuth support, and stronger enterprise security controls.
Cloud-Ready Platform	Accelerate deployment and upgrades with the Automated Cloud Installer, reducing implementation effort while modernizing your testing platform for cloud environments with modern authentication and support for the latest SAP and enterprise technologies.

Why Upgrade Now?

Upgrading to Worksoft 2026 is about more than staying on a supported release. It gives your organization the tools to automate smarter, reduce maintenance, accelerate release cycles, and confidently support modern SAP and enterprise transformations.

With AI-powered automation, impact-driven testing, enterprise test orchestration, integrated test data management, modern reporting, and cloud-ready deployment, Worksoft 2026 delivers a modern testing platform built for today's enterprise and tomorrow's AI-driven business.
